All,

I have reached agreement with Graham Shanks on comments 400/401 and 387.

400/401 relates to a desire to include additional symbology representations beyond 2525b/App6 as optional symbology elements. Resolution was agreed to as a PCR for Version 2.

387 relates to enumerations (msdl codes) that have no annotation. I'm recommending we add the annotations to the schema. DG needs to discuss the implications of adding these to the specification as well.

Jeff
